Our 2018 Stud Plans include the following:

- All stud related visits
- A single clitoral CEM swab (depending on the package)
- All pre- and post-insemination ultrasound examinations
- Drugs used to routinely control the oestrus cycle and induce ovulation
- Artificial insemination
- Routine post-insemination uterine management including oxytocin
- Repeat pregnancy scans up to day 45

Please note that the following are NOT included in the plan prices:

- Drugs used to facilitate safe examination of your mare such as sedation or Buscopan™
- Management of excessive intrauterine fluid including repeated washouts, Excenel™, saline solution and uterine lavage sets
- Twin reduction
- Investigation or treatment of subfertility/infertility such as endometrial swabbing/biopsy, endometritis or Caslicks procedure
- Regumate™
- Investigation or treatment of any other illness or injury

Disclaimer

The range of medicines licensed to use in the horse in this country under the UK Veterinary Medicines Regulations is very limited and becoming more so. To achieve the best fertility results in your mare we may from time to time use medicines unlicensed in the UK under a system called the Cascade. These medicines may be licensed in another species, another country, for a different condition in the horse or as a human medicine.

- I understand that mares boarding at End House will be treated at the discretion of the vet, using medicines they deem most appropriate and give permission for the use of unlicensed medications were deemed necessary in accordance with the Cascade
- I understand that the handling and storage of semen at End House Stud is done so entirely at my own risk and that North West Equine Vets take no responsibility for loss or damage.
- I agree to be invoiced direct by North West Equine Vets, and I agree to pay all reasonable costs and expenses that may be incurred whilst the horse is under their care. I understand that certain treatments and procedures are not included in the stud plans and additional costs may be incurred.
